Angular 6 Training Course

Setup

- These notes assume you have **administrator rights**.
- The command-line refers to the **terminal** (Mac) or **command-prompt** (PC).

Browser

- Install **Chrome**

Text Editor

- Install **Atom** or **Visual Studio Code**.

Node

- Install **Node** (which also installs NPM)
- Open a command-line window and check Node/NPM versions:

```
node --v
npm --v
```

- The Angular 6 CLI requires Node v9.8 or later.

Angular CLI

- Install the **Angular Command Line Interface (CLI)** globally.

```
npm install -g @angular/cli
```

- Check the Angular 6 CLI is running:

```
ng --version
```

```
ng --help
```

Useful tools

- **Typescript** can be run from the command line.

```
npm install -g typescript
tsc code.ts
```

- http-server creates a local web server

```
npm install http-server -g
```
